INTRODUCTION: The HYDRO SENSE consists of two components, the MAIN UNIT contains the batteries and electronic components, and the Wi-Fi communication electronics. The MAIN UNIT is NOT WATER PROOF, and should be mounted on a vertical surface UP OFF THE FLOOR/GROUND to ensure it does not get submerged or splashed with water in your desired installation environment. The MAIN UNIT can optionally be wall mounted utilizing the included peel-and-stick pad, or you may utilize the battery compartment cover mounting holes and the included screws/hollow wall anchors to wall mount.

The other component, the WATER SENSOR, IS of course water proof, features an integrated mounting hole for mounting with included screw if desired, otherwise the hardware kit includes a small peel and stick double sided adhesive square. The two gold colored WATER SENSOR sensor electrodes MUST both be wet together to detect the presence of water.

PLACE HYDRO SENSE ANYWHERE INDOORS TO MONITOR FOR WATER PRESENCE OR LEAKS

HYDRO SENSE, when used in conjunction with AcuRite NOW app, can be setup to monitor and alert you* to water leaks in common areas, such as under sinks, behind washing machines, refrigerators with water lines, water heaters, behind/under dishwashers, or anywhere else where there is water plumbing/lines and potential for leaks.

Additionally, the HYDRO SENSE WATER SENSOR can be positioned to alert you to a specific water level- like in a sump pump well. The sensor can be positioned within the SUMP PUMP WELL to alert you to a high level thereby alerting you to a failed sump pump. Hydro sense can also be setup to alert you* to when there is NO water present. For example, when you want to know when the watering trough for animals is empty, etc.
