**Using the Water Detector**

The Water Detector works as a stand-alone unit which can be placed where leaks may occur and has an audible alert when liquid is detected. It may also be used with a Wireless Receiver (sold separately) which can be placed in a living area, ensuring that you hear the alert.

**Placement Guidelines**

Water will naturally flow towards the low point of the area that is being monitored. For the best results, place Water Detector in an area where water is most likely to collect.

You may place the Water Detector upright in the desired location (Figure A), or mount the base with the wired sensor placed on ground level (Figure B).

**NOTE:** The sensor is water-resistant and is designed to detect the presence of liquid/leaks. However, to extend its life, place the Water Detector in an area where it will not remain submerged in liquid.
